Abrasive Sleeves

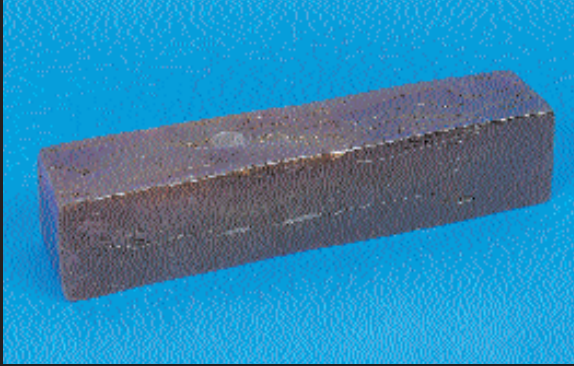

- Grits available: 80, 100, and 150 (open grain)
- Shrink wrapped and sold in packages of 10
- Special orders: other materials, sizes, grits, coatings on request

For the highest quality sanding of irregular shapes and contours at low cost, the ToolMasters Swedish abrasive sleeve has no substitute in the woodworking field. This soft, flexible, and strong material has a "J" weight backing to provide these sleeves with maximum efficiency and a long abrasive life under continued use. Constructed of premium aluminum oxide open coat grains with all resin bond coating, these sleeves are lap jointed and meet the highest industrial standards available. When ToolMasters abrasive sleeves are used on a pneumatic drum, they assume a barrel shape that conforms to contoured shapes to produce work comparable to that of skilled craftsmen, regardless of grain direction.

To order abrasive sleeves refer to the dimensional chart shown on the back of this sheet.

ToolMasters Abrasive Sleeve Cleaner

The ToolMasters abrasive sleeve cleaner removes abraded material that has lodged between the abrasive grains of your sanding surface. This easy and practical cleaner gives the operator 3 to 4 times more life out of the abrasive sleeve. After holding the cleaner against the moving sleeve for only a few seconds, the sleeve looks and performs like new. This simple tool prevents burning, chatter marks, and machine vibration caused by loaded sleeves and also increases the quality and uniformity of the finish. The ToolMasters abrasive sleeve cleaner is made in the USA of smoked rubber which is denser and wears down slower than crepe rubber products. Available in one size: 1-5/8" x 1-5/8" x 8-1/4".

Abrasive Sleeves

Actual Product Size

| Actual Size | | | Part Number (last 4 digits reserved for grit) |
